

# Fun in the sun

With your swimming pool

*...but what you don't know can hurt the environment.*

Here are some suggestions to discharge your swimming pool water properly.

1. De-chlorinate the water by allowing it to sit untreated for up to 4 - 7 days.
2. Remove excess sediment and leaves from the water prior to draining.
3. Make sure you discharge the water away from houses.
4. Discharge the pool water so that it doesn't enter the storm drain or stream directly.
5. Release the water over grass to aerate, filter, and slow down the flow.
6. Discharge pool water at a slow rate so it doesn't cause soil erosion.
